This improved MK4 version has some new features you asked for - we found a few things we could improve, so we did, as we always do :-)

Screw the printed tool on the Prusa Lubricant tube, carefully put the bearing on and turn it counterclockwise until you feel some resistance. Then press the tube and watch the tip of the tool for grease leak. Once the grease starts leaking, turn the bearing over and do the same thing from the other side as well. Then the bearing is lubricated sufficiently.
For 8mm bearings check my Prusa lubricant LM8UU adaptor
